Summary

Software engineer capable of building a complete web presence from the
ground up. I have experience with a variety of web technologies and frameworks with a
preference for full-stack programming. Always keep up to date with best practices and
industry standards. I'm driven by interesting problems and learning opportunities.

Programming: HTML5, CSS3, Javascript, Node, PHP, MySQL
Frameworks: Bootstrap, SASS, Jquery, React, Laravel, Wordpress
Tools: Git, NPM, Webpack, Gulp

Work Experience

Software Engineer, Rx Savings Solutions   October 2016 - October 2017

- Worked on the in-house administration application written in PHP using Laravel.
  Generally, the application allowed non-engineering team members to create,
  retrieve, update, and delete data as it served their purpose. My contribution
  included tasks like writing secure and efficient database queries, performing
  precise form validation, and implementing user interfaces.

- Collaborated with team members to rebuild our primary front-end application
  from scratch using React. This involved scanning through design files to
  determine component structure, interacting with the api via AJAX, implementing
  "single source of truth" state management using MobX, and building out the app
  to completion.

- Maintained and extended our Angular 1.5 application in which I carried out full
  feature development, rigorous accessibility testing, and browser specific bug
  fixing.

- Reimplemented the company's public facing, static PHP website in Craft CMS
  and executed a major redesign. This involved communicating with the marketing
  team and designer to determine project requirements that would create the most
  utility and best user experience.

Education

Software development program, from Kanone   August 2016
   Designed to teach the skills necessary for a career in software
   development. Approximately 500 hours of learning, involving online courses,
   resources, and independent projects.

Programming courses, from Udemy
   Over 200 hours of independent study consisting of video lectures
   and exercises. I've completed courses on many different subjects including
   React, MySQL, Laravel, Bootstrap, and Wordpress.
